

Manager Training for Apache Hadoop

Understand How Apache Hadoop Fits into Your Infrastructure

To fully understand the impact Apache Hadoop has on your organization's infrastructure, it is critical to understand its business benefits, required resources and potential uses. Cloudera, the leader in Apache Hadoop-based software and services, offers a one-day course that unveils Hadoop, giving decision makers a thorough understanding of what the technology is and how it would impact their organizations. Learn how to use the technology for a competitive advantage, cost and time savings and solving data problems.

Format

The course is a seminar format with an interactive question session and a discussion-oriented exercise.

Applicability

The course is appropriate for IT managers, architects or anyone who wants to understand the big picture of what Hadoop brings to the enterprise. All levels of technology knowledge are welcome; there are no prerequisites for this training.

Agenda Topics

- Why Hadoop? Use cases and case studies
- Understanding the Hadoop Platform: Hive, Pig, HBase, Sqoop, Flume, Hue and Cloudera's Distribution including Apache Hadoop
- The big picture: How Hadoop fits into your architecture
- Managing a Hadoop cluster: What resources are required? How does it scale?
- Understanding the Apache open-source model and Cloudera's role

Cloudera, the leader in Apache Hadoop-based software and services, offers intensive Hadoop training that arms you with the knowledge and skills to take full advantage of this powerful open source technology.
